Test Run Report — Run #150

Environment: **Production** • Website: **aepc2.p2agentx.com** • Trigger: Scheduled • Started: Aug 12, 2026 20:00 • Ended: Aug 12, 2026 22:47

Generated: 8/13/2026, 1:53:07 AM

Summary

210	88.4%	167 / 22	21
Total Tests	Pass Rate (excl. skipped)	Passed / Failed	Skipped (connection)

Failures (22)

Failure Cluster	Category	Failures
LLM Reasoning Issues	Llm Reasoning	9
Tool Execution Failures	Tool Execution	9
Data Availability Issues	Data Availability	3
Graph/Visualization Errors	Graph Visualization	1

LLM Reasoning Issues LLM REASONING (9 failures)

1. Noor_AI_aqaba

Production • 21.6s

Question: Please plot my current and voltage in a dual axes plot on the deepest possible granularity level for inverter3

Error reason: AI indicated failure (matched 'encountered an issue'): Sorry, we encountered an issue processing your request. Our team has been notified and will investigate. 11:06 PM Do you want to report this error? YES NO Time taken: s, token: tokens connected t

TECHNICAL EVIDENCE

Exception	`AttributeError: 'NoneType' object has no attribute 'rule_code'`
Agent / Tool	`graph_agent / extract_timeseries_data_ag`
Endpoint	`/testuser1/ai_agent_chat`
Location	`agent_graph.py:606`

API call: `GET /testuser2/ai_agent_chat → 400`

Raw API response:

```

Unable to compute clipping losses per inverter for the last two months due to an internal tool error:
- Error encountered: `calculate_clipping_or_curtailment_losses_ag` failed with an unexpected keyword argument `reactive_col`.
No inverter-by-inverter clipping loss values are available at this time.
• The visualization "Clipping Loss by Inverter — Last 2 Months" has been prepared.

    ],
    "urls": [],
    "steps": "1. Choose data from August 12, 2026, including that day.\n2. Find all inverter power columns
and their DC rated powers using the plant's metadata.\n3. Set calculation parameters: irradiance threshold
(usually 50 W/m²), power threshold (usually 0.1 kW), and data interval (typically 5 minutes).\n4. For each
inverter, filter to times when irradiance is above the threshold, then count the total useful intervals (T_
useful) and downtime intervals (T_down).\n5. Convert these interval counts into hours based on the data int
erval.\n6. Calculate Technical Availability for each inverter: (T_useful - T_down) / T_useful × 100.\n7. Re
turn a dictionary with the availability percentage for each inverter.\n\n---\n\n1. Select data from August
12, 2026, including that day.\n2. Use the active_power column(s) for calculations.\n3. Clean the data by re
moving or flagging invalid power measurements.\n4. For each data point, calculate energy as (Power × 0.0833
hours), converting units if needed (e.g., from Watts to kW).\n5. Include all days in the calculation.\n6. A
dd up all energy values for the selected period to get the total energy.\n\n---\n\n1. Select data from Augu
st 12, 2026, including that day.\n2. Filter the data to only include plane of array (POA) irradiance readin
gs from the pyranometer.\n3. Convert irradiance (W/m²) to irradiation (kWh/m²) by multiplying by the time i
nterval (0.0833 hours).\n4. Group the irradiation values by day (or other chosen period) to get total irrad
iation for each period.\n5. Normalize the total irradiation by dividing by the standard test condition irra
diance (1000 W/m²) to get the Reference Yield.\n6. Return the Reference Yield for each period as a dictiona
ry, representing peak sun hours or kWh/kWp.\n\n---\n\n1. Select data from August 12, 2026, including that d
ay.\n2. Group the data by day (or by minute, hour, month, or year as needed).\n3. Include all days in the c
alculation.\n4. Calculate the total energy produced during the period using the plant's power data and the
time interval (0.0833 hours).\n5. Normalize the total energy by dividing by the plant's installed capacity
(rated power) to get the specific yield in kWh per kWp.\n6. Return the specific yield for each period as a
detailed breakdown.\n\n---\n\n1. Select data from August 12, 2026, including that day.\n2. Identify the rel
evant columns for power, irradiance, and temperature.\n3. Clean the data by removing or flagging invalid po
wer and irradiance measurements.\n4. Calculate the actual energy produced by multiplying power by the t
