objects recorded	passed	failed (api_error: true)	check errors

What this report is. A rendering of the values saved by this check. It is not a screenshot of S3, not a copy of the raw JSON objects, and contains no stack traces or error detail beyond what the check saved.

- `api_error: false` means the pipeline recorded no exception. That includes runs with no new data, so it is not a freshness guarantee.
- `api_error: true` shows an exception was recorded. The flag does not reveal its cause.
- S3 lastModified is when the object was written; Checked at is when this check read it. All times are UTC.

Failure evidence

EVIDENCE 1 · PIPELINE FAILURE

Galleria_Mall FAILED

Plant name	Galleria_Mall
S3 object key	`Galleria_Mall.json`
Recorded api_error	`true`
S3 lastModified	2026-10-20 00:03:56 UTC
Checked at	2026-10-20 00:51:02 UTC
Saved message	api_error=true: the latest recorded data update raised an exception.

The pipeline recorded api_error: true for this plant. The flag shows that an exception occurred; it does not reveal the cause.
