calculate clipping loss if any for July 2026

I used `clipping\_loss\_via\_requests` for July 2026, but it failed due to a missing required column in the backend query: `wind\_speed\_1` could not be resolved.

So I can't provide a clipping loss value from that tool for July 2026 on this dataset.

The screenshot displays the P2Chat application interface. At the top, there's a navigation bar with icons for AI Brain, Job Card, Maintenance, Chat (selected), and Teams. The main chat area shows a message from the system providing active power values for six inverters:

- inverter2_active_power: 618.5402 kWh
- inverter3_active_power: 1760.9091 kWh
- inverter4_active_power: 1760.9091 kWh
- inverter5_active_power: 618.5402 kWh
- inverter6_active_power: 1255.2086 kWh

Below the data, the status is "Good" and the time is "08:53 AM". A follow-up question asks, "Are you satisfied with the answer?", with thumbs up/down and share icons. Three links are provided: "Click here for Source", "Click here for Steps", and "Click here for Tools". On the left side of the chat window, there are three circular icons representing document, graph, and tools.

At the bottom of the chat window, it states "Time taken: 12s, token: 0 tokens". Below the chat window, a status indicator shows "connected to Bf Wheeling". The input field at the very bottom contains the placeholder text "How can we help you today?" and includes a microphone icon and a send button (blue arrow).

At the bottom of the entire page, there is a footer section with two parts:

- LEAVE ANY FEEDBACK**: Accompanied by a speech bubble icon.
- A disclaimer: "Mistakes in P2Chat are possible. Double-check key information."
